Precautions After V Line Injection

It's common to experience some swelling and bruising following your V Line Injection procedure. Please follow these precaution instructions for your best recovery:

1. Please avoid saunas or hot baths for at least 1 week.
2. Wearing supportive compression garments as often as possible is helpful for the best result.
3. The effects of the tightening gradually become apparent between 4 days to 2 weeks. In rare cases, facial asymmetry may occur during healing process, but if it persists after 2 weeks, please visit us for a follow-up correction.
4. Since V Line Injections create a lifted effect, those who frequently frown with lips might experience some discomfort or awkwardness.
5. A temporary sensation of tightness during the onset of the treatment's effects will dissipate.
6. You may resume makeup and cleansing routines immediately after the procedure.
7. V Line Injections are recommended every 3 months to maintain the results.
8. You may see the full result of the tightening gradually within 2 weeks, please avoid other treatments (like ultrasound lifting or contour injections) until after a 2-week period if you would like to see the actual results.
9. Please feel free to contact us any time for a follow up appointment.
